

ENOUGH IS ENOUGH!

THE CHALLENGES WE FACE TODAY

Rising sea levels, more extreme weather events, loss of biodiversity. Our climate is breaking down and destructive industries continue to threaten our forests, oceans and air. But together we can overcome these challenges.

Climate change & Global Warming

Our climate is breaking down. Rising seas and extreme weather events are costing lives and putting tens of millions of people around the world at risk.

Greenhouse gases are the main cause of climate change. The increasing amount of greenhouse gases being released into the air is causing a layer around the earth, trapping the sun's rays and redirecting them back to the surface. The biggest culprits are burning fossil fuels, farming and deforestation.

Pollution

Pollution is one of the primary causes of many of the other environmental concerns, including climate change and biodiversity. All 7 key types of pollution – air, water, soil, noise, radioactive, light and thermal – are affecting our environment.

All types of pollution, and environmental concerns, are interlinked and influence one another. So, to tackle one is to tackle them all. That's why we need to work together!

Plastic

Plastic is everywhere. Useful and convenient, it's also a massive pollution problem, especially in our oceans. Turtles and seabirds become ensnared in discarded plastics, and tiny micro-plastics are eaten by pretty much everything. We need to solve this problem at the source, and produce less plastic in the first place.

“Never doubt that a small group of thoughtful, committed, citizens can change the world. Indeed, it is the only thing that ever has.”

- Margaret Mead

Biodiversity

Our club will definitely enhance our school's and our city's sustainability.

Our club is about selling handmade, recycled pen pots, raising awareness and money to donate to a eco campaign to help save our home.
